Dear Sir,

RE: DONATION REQUEST AND SUPPORT.

We are in the beginning of the year 2023 and as children start going back to school it is difficult for parents who are struggling economically due to the effects of climate change to support their children to go back to school and those who make it to school are facing challenges of lack of food and water.

The rains have failed for four consecutive years and the drought is not helping the agriculture sector, where a majority of the public are subsistence farmers, and it has greatly affected the family's livelihood.

If this continues many children going to school will drop out be malnourished and this will take a serious impact on this generation.

We are challenged as a county and cannot do enough with our present resources; therefore, we humbly request you to come join hands with our county and help in anyway to avert this disaster in the immediate instance and possibly interventions to continue into the long term partnership, we will appreciate any assistance as well and not limited donations for bursaries and feeding the school going children in all sectors ECD, Primary, Secondary and Colleges, these are very welcome in this immediate instance.

Your assistance in any way to avert this disaster in the immediate instance and possibly interventions to continue into the long-term partnership.

Our county also outside the school programs needs assistance with food relief, health care, water projects, climate change disaster intervention related programs.

Your partnership in these fields will help immensely to create a better future for humanity and the environment.

With anticipation of a favorable response.

Thanking you,
Yours sincerely,

Samera Aziz
Office of the Governor
Donor, Partner Development & Coordination
Machakos County.
