

Building Healthcare Resilience in Africa: Trends and Partnerships

Sustainable healthcare for all is an essential prerequisite for a sustainable global future. Nevertheless, many African countries still face the challenge of providing adequate responses to their medical needs. Building quality healthcare systems requires proactive action by policymakers and economic stakeholders. African countries need global commitment and mutual support through strong partnerships and robust health emergency response mechanisms to move towards a more resilient and secure healthcare system. The capacity of the health workforce, good policies and governance, infrastructure and cost-effective financing instruments become key elements in building a resilient healthcare system in Africa.

Key topics

- **Global Partnership** (Do we need healthcare partnerships?)
- **Healthcare infrastructure**
- **Skills development & workforce in medical sector**
- **E-Health** (AI; E-Mobility)
- **Pharma** (Drugs, Biotechnology, Generic drugs and Vaccines)
